

Suicide Bereavement Training

Authors of the training

Dr. Sharon McDonnell¹, Professor Nav Kapur², Professor Jenny Shaw², Professor Carolyn Chew Graham³, Barry McGale¹, Shirley Smith⁴, Dr. Lis Cordingley²

¹ Suicide Bereavement UK

² University of Manchester

³ University of Keele

⁴ If U Care Share Foundation

Aim of the training

To provide health professionals with an opportunity to build their confidence and skills caring for parents bereaved by suicide

About PABBS training

The development of the PABBS training was funded by the National Institute for Health Research (NIHR), Research for Patient Benefit (RfPB) Programme (PB-PG-0110-21047) and led by Dr. Sharon McDonnell based at the University of Manchester. The training is evidence-based theory-driven and has been informed by a three year study which identified the vulnerability and perceived needs of parents bereaved by suicide and health professionals who were responsible for their care.

It is a highly interactive one day workshop and includes a workbook, nine film clips and a 60 page manual for future reference. Eighteen people are able to attend each workshop. This training is first of its kind internationally.

Target audience

- Originally designed for health professionals, specifically, GPs and mental health professionals, but pilot workshops have revealed it is relevant to a much wider audience.

What competencies do attendees gain?

- recognise that supporting those bereaved by suicide is a key component of suicide prevention;
- enable health professionals to increase their knowledge, confidence, skills and provide a framework and service-response plan for immediate and ongoing support for parents bereaved by suicide;
- increase the need to ensure parents remain engaged with health professionals and services after their child's death; and
- encourage health professionals to consider and recognise their own emotional or self-care needs and develop a strategy or support structure that will be available to them if a patient dies by suicide.

How does PABBS training help to address England's suicide prevention strategy? (DH, 2012)

- PABBS training informs and guides attendees how 'to provide better information and support to those bereaved by suicide' which is a key priority for the strategy (DH, 2012);
- It also focuses on the vulnerabilities and needs of health professionals affected by suicide. This is important as they are also recognised as a vulnerable 'high risk' group in the suicide prevention strategy (DH, 2012).

How is the programme quality assured?: What evidence is the programme based on?

PABBS training has been informed by the following:

- three year study funded by National Institute for Health Research (NIHR) Research for Patient Benefit (Ref: RfPB: PB-PG-0110-21047) which explored the experiences and perceived needs of parents bereaved by suicide and health professionals responsible for their care;
- conducted detailed analysis on existing postvention training (UK and internationally) to identify best practice as well as possible areas for improvement and development. Particular attention was paid to the evidence base and published evaluations of training interventions and existing suicide bereavement literature;
- Sharon McDonnell visited postvention experts in Australia, New Zealand and America; and
- also attended a monthly Survivors of Bereavement by Suicide (SOBS) self-help group for four years (2011-2015).

About the research team

The research team consists of a suicide bereavement researcher, two psychiatrists who specialise in suicide prevention, one practicing GP, a mental health nurse, a mother bereaved by suicide and a health psychologist who teaches medical students. Several members of the team have significant experience of developing and delivering evidence-based, theory-driven training. Three members of the team have been bereaved or affected by suicide.

About the Trainers

Each workshop is delivered by two trainers who have considerable knowledge and expertise supporting families bereaved by suicide. One of the trainers will be an author of the PABBS training.

When will PABBS training be available?

- Winter 2016

Publication, directly associated with PABBS training
